

Would you let years go by between visits to the dentist?
Just imagine if you didn't brush your teeth for years and years.....

Dental care is just as important to your pet's general health as it is to yours.

More than 80% of all pets have periodontal disease by the time they are 3 years old!

Dental disease leads to bad breath, painful chewing, and tooth loss. It also will lead to heart disease, kidney problems and other serious health effects.
